THE PIPES AT (A) & (B) at the south corners of the NE ¼ of the NW ¼ of Sec. 6 are probably from a survey in the early 1900's. The east side of the NE ¼ NW ¼ is approx. 19' longer than the orig. survey and supplemental plat of 1933 show. Also the east line of the SE ¼ NW ¼ is approx 18' longer. Therefore Pipe (B) is proportionally in the correct location. The pipe at the N ¼ Cor. of Sec. 6 has been used for many surveys in the past few years but it is located approx. 20 feet North of the E of PUNKIN CENTER RD. as it was constructed. That fact together with the long distances might indicate that the N ¼ cor. is too far North.
