

Gen. Description of T. 4 N., R. 29 E., W.M.

on both sides of the Umatilla River, this Tp. is wholly unfit for cultivation, consisting whether in tables or flats, mostly of sand and is valuable only for its bunch grass here, rendered available by propinquity to the water of the Umatilla, the only Summer Stream within its boundaries.

"Dry Run" probably contains water only in the wet season and then, but a short time.
